

# MULTIMASTER

## G7104A

Multi Purpose  
Base Station  
Tester

# MultiMaster

#### Introduction

The GenComm MultiMaster is a comprehensive and cost effective solution for performing base station and repeater maintenance in any environment covering all CDMA Standards including cdmaOne, cdma2000 1x RTT, cdma2000 1xEV-DO, and W-CDMA. MultiMaster eliminates the need for engineers to carry a multitude of separate instruments such as Spectrum Analyzer, CSTS, Power Meter, Signal Generator, Antenna Tester, Optical Power Meter and E1/T1 Analyzer to perform BTS maintenance. MultiMaster has integrated all of these instruments into one box. Additionally, the unique feature of multi-tasking screens and auto measure and test capability increases user productivity dramatically.

#### Feature

##### Integration of Multi-function

MultiMaster has integrated all necessary functions to test and measure CDMA Systems in one box without the need for additional sensors or options.

##### High Accuracy & Reliability

MultiMaster provides fully compatible accuracy and reliability compared with current stand alone testing tools commonly available for base station maintenance.

##### Easy-to-use User Interface

MultiMaster uses a menu structure that is easy to learn and enables engineers to set complicated radio configurations quickly. By pressing a single button, engineers can move to the pre-defined Service Provider specific set-up in no time.

##### Auto Measure and Error Logging

The Auto Measure function is used to test the system and save the result to either internal or external memory devices under specified measurement conditions and schedule. This function is very effective for tracking, monitoring and isolating intermittent problems.

##### Compact and Lightweight Design

MultiMaster is compact and portable for engineers to perform outdoor maintenance jobs. The built in high capacity Li-ion battery allows jobs at remote sites without being restricted by power cords.

##### On line Firmware Upgrade

MultiMaster automatically checks the latest firmware version and performs remote download & upgrade if necessary when it is connected to network via an Ethernet Port. The user can also easily perform firmware upgrades using a USB Memory Stick.

# MultiMaster

## One-box Solution for BTS Maintenance

**Spectrum Analyzer**  
100kHz ~ 2,985MHz

**TX Analyzer**  
cdmaOne ,cdma2000, 1X EV-DO, WCDMA  
(Code Domain Analysis, Channel Power, ACP(L)R Emission Mask, Occupied BW, Over The Air)

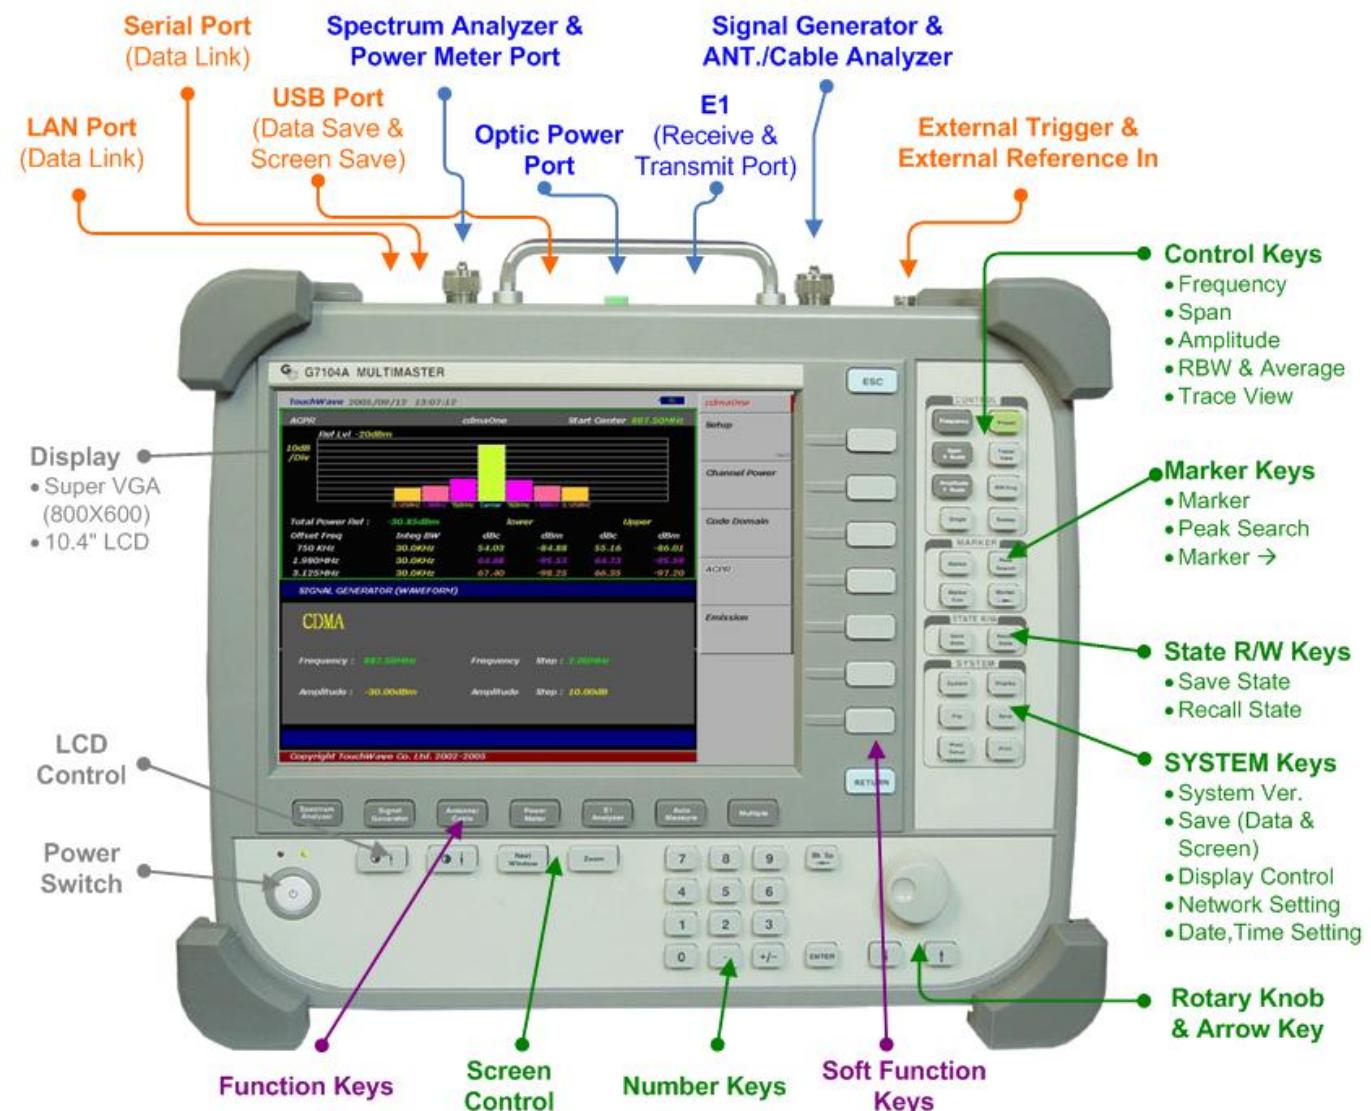

**Signal Generator**  
Single Carrier Generator over 800MHz ~ 2.7GHz

**Antenna/Cable Analyzer**  
Cable Loss , DTF  
Antenna VSWR  
(In Service , Out of Service)

**RF Power Meter**

**Optical Power Meter**

**E1/T1 Analyzer**

## Base Station Test Tools

### Multi Purpose Base Station Tester

# MultiMaster

#### Main Function

##### ○ Spectrum Analyzer

MultiMaster has the function of 3GHz Spectrum Analyzer to provide field engineers and service technicians with excellent performance of a desktop analyzer.

##### ○ TX Analyzer

MultiMaster has the function of powerful TX Analyzer to test and measure all current CDMA Systems including cdmaOne, cdma2000, 1xEV-DO and WCDMA.

###### ▷ Code Domain Analyzer

- Code Domain Power
- Frequency Error
- Time Error
- Waveform Quality
- PN Searcher
- EVM, PCDE (WCDMA)

###### ▷ Multi-FA Channel Power

###### ▷ ACP(L)R

###### ▷ Spurious Emission

###### ▷ Occupied BW

##### ○ Over The Air

MultiMaster provides Over The Air measurement for quickly identifying the performance of the base station transmitter.

Over the air measurements are especially useful in testing the performance of the cell sites which are not directly accessible.

##### ○ Channel Analysis

MultiMaster has the functions of assigned channel analyzer. It will help the user find out the intermittent signal, check and monitor the channel characteristics. The result of the Interference Analysis can be saved as the frame based screen into the internal or external memory, and then can be replayed just like the real signal.

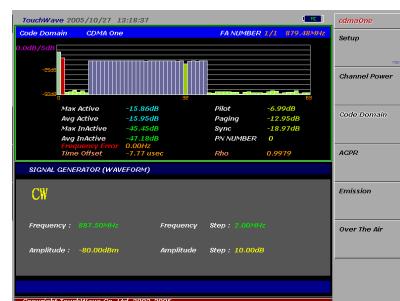

##### ○ Signal Generator

MultiMaster has the functions of CW, CDMA and WCDMA single carrier generator. Combining this with other functions like spectrum analyzer or RF Power Meter, the user can easily isolate faults on the RF path.

###### ▷ Frequency Range : 800 ~ 2,700MHz

###### ▷ Output Dynamic Range : -30(-10) ~ -80(-90)dBm

Values in parenthesis ( ) is the CW signal output range

# MultiMaster

## Main Function

### ○ Antenna/Cable Analyzer

MultiMaster has the functions of antenna and cable test for measuring Cable Loss, DTF (Distance To Fault) and VSWR. Since MultiMaster can measure the VSWR while the system is In-Service, it does not interrupt Service, thereby maximizing air time and minimizing subscribers' complaints.

▷ Cable Loss: Up to 30 dB

▷ VSWR Analyzer

▫ 800 ~ 2,700 MHz

▷ In Service VSWR (T/Rx, Rx Only Antenna)

▫ VSWR Range: Up to 8.5

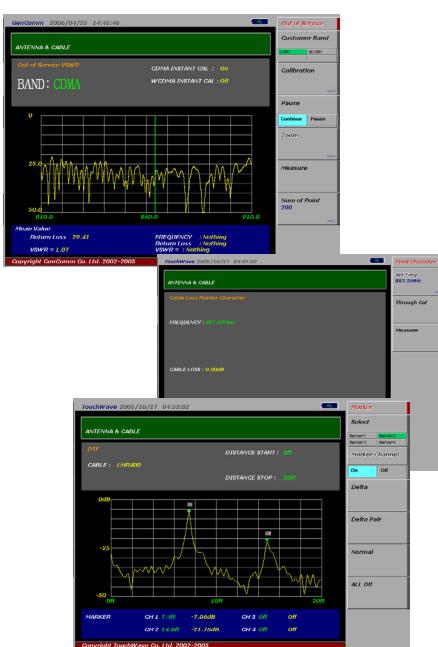

▷ Out of Service VSWR

▫ VSWR Range: 1.07 ~ 15

▷ DTF Analyzer

▫ Distance: up to 300m

▫ Resolution: 0.5% of measuring distance.

### ○ Power Meter

Power Meter consists of two functions as below.

▷ RF Power Meter

Without external sensors, MultiMaster can measure RF output power transmitted from an antenna.

▫ Dynamic Range:

100kHz~ 2.985MHz

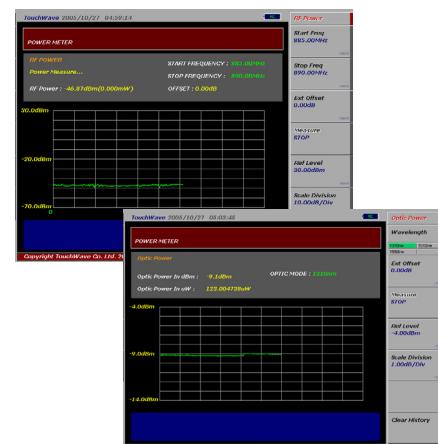

▫ Power Dynamic Range:

+30~80 dBm

▷ Optical Power Meter

With a built in Optical Power Meter, the user can measure the optical power transmitted between the Master and Slave units of Repeater.

▫ Display Unit: dBm, uW

### ○ E1/T1 Analyzer

MultiMaster provides a testing solution for a user's E1/T1 transmission line. Various test modes are available for the user to select.

▷ Mode: Term, Monitor, Bridge, Loop

▷ Frame: PCM30, PCM31, Unframed

▷ Code: AMI, HDB3,B8ZS

▷ TX Pattern: 1-8, 1-16, ALL0, ALL1, 0101, 2E20

▷ E1/T1 Pulse Mask

▷ Alarm, Error Count and Logging

## Base Station Test Tools

### Multi Purpose Base Station Tester

# MultiMaster

#### Main Function

##### Multiple Test Screen

Since MultiMaster supports multi tasking, performing more than two main functions simultaneously is possible. By using Multiple functions, the user can select a proper combination of functions and perform multiple tests at different points at the same time.

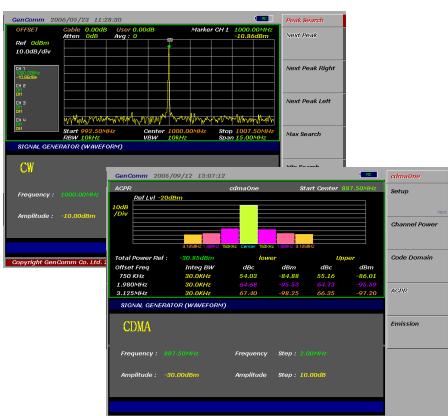

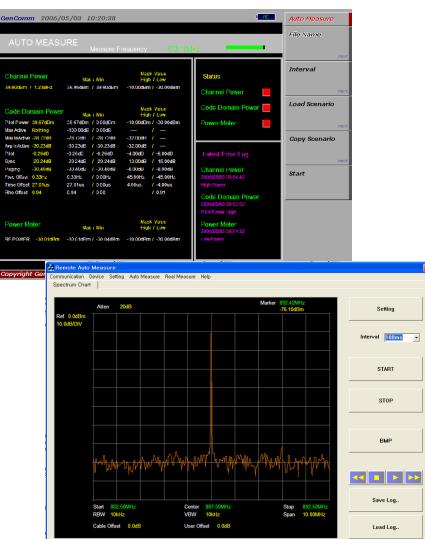

##### <Available set of multiple windows>

△: Not available for WCDMA Test Mode

##### Auto Measure

System malfunctions sometimes appear irregularly and it is hard to isolate them quickly. In such case, the user needs a tool to monitor the system for a long enough time to detect the exact symptoms and figure out the problem. By using the Auto Measure function, the user can easily set up the testing schedule such as starting time, duration, measuring interval and parameters. Based on the user defined conditions, MultiMaster performs the test and records the results by itself.
