

All ACR7000 Series controllers are equipped with Ethernet communications. Factory default IP address is **192.168.100.1**

Download **Parker Motion Manager** software to configure and program the controller. Includes detailed user guides.

Standards and Conformance

CE Marking Directive 93/68/EEC

EMC Directive 2014/30/EU

RoHS Directive 2011/65/EU (RoHS2)

EN 61800-3 Adjustable speed electrical power drive systems - EMC product standard including specific test method

Safety Warning

High-performance motion control equipment is capable of producing rapid movement and very high forces. Unexpected motion may occur especially during the development of controller programs. KEEP WELL CLEAR of any machinery driven by stepper or servo motors. Never touch any part of the equipment while it is in operation.

This product is sold as a motion control component to be installed in a complete system using good engineering practice. Care must be taken to ensure that the product is installed and used in a safe manner according to local safety laws and regulations. In particular, the product must be positioned such that no part is accessible while power may be applied.

This and other information from Parker Hannifin Corporation, its subsidiaries, and authorized distributors provides product or system options for further investigation by users having technical expertise. Before you select or use any product or system, it is important that you analyze all aspects of your application and review the information concerning the product in the current product catalog. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, safety, and warning requirements of the application are met.

If the equipment is used in any manner that does not conform to the instructions given in the user guide, then the protection provided by the equipment may be impaired.

ACR7000 Quick Reference Guide

Multi-Axis Motion Controller

ACR74C - 4 Axis

ACR78C - 8 Axis

1	Input 11 +	Output 35 +	Input 23 +	Output 39 +

*Only included with 8 axis controllers

Analog Inputs (-ANI Option)

Pin	Signal	Pin	Signal
16	Analog Ground 7	15	Analog Input 7
14	Analog Ground 6	13	Analog Input 6
12	Analog Ground 5	11	Analog Input 5
10	Analog Ground 4	9	Analog Input 4
8	Analog Ground 3	7	Analog Input 3
6	Analog Ground 2	5	Analog Input 2
4	Analog Ground 1	3	Analog Input 1
2	Analog Ground 0	1	Analog Input 0

The Motion Enable Input **MUST** be connected to 24VDC in order to enable drives.

NOTE: Motion Enable Input can be used as a part of a circuit to prevent motion and remove power from the motors. Note that if the input is deactivated while in motion, **command signals will be blocked immediately without a deceleration ramp.**
