

Bad IIR Filter Designs

Always verify that your design satisfies the specifications!

Very tight specs can result in meaningless designs

Example: Low pass Butterworth

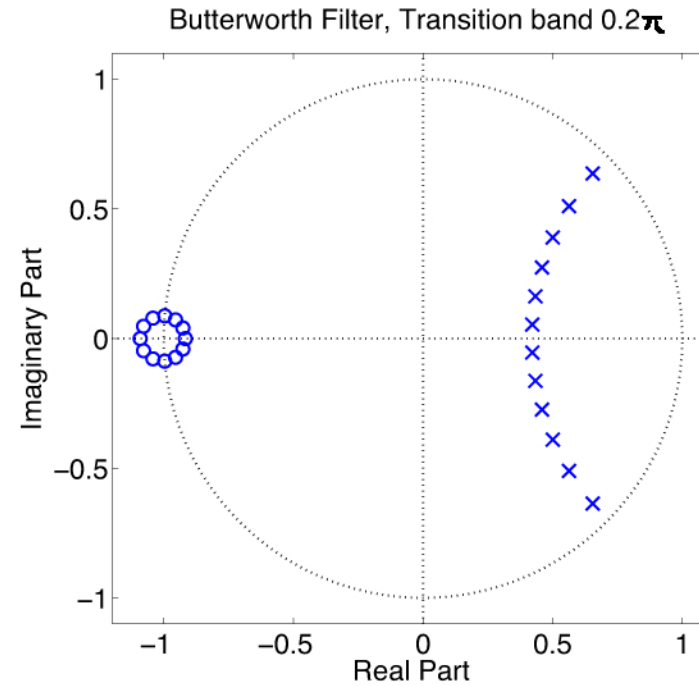

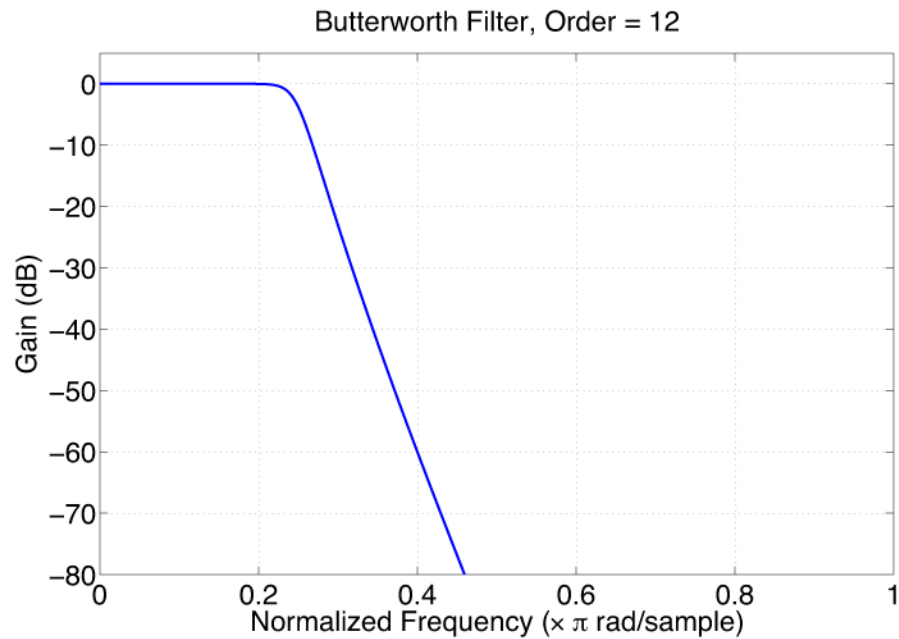

Case 1: $\omega_s = 0.4\pi$ rads

Case 2: $\omega_s = 0.24\pi$ rads

Case 1: Transition band 0.2π rads

2

Coefficients, transition band 0.2π

$B = 1.0e-03 *$

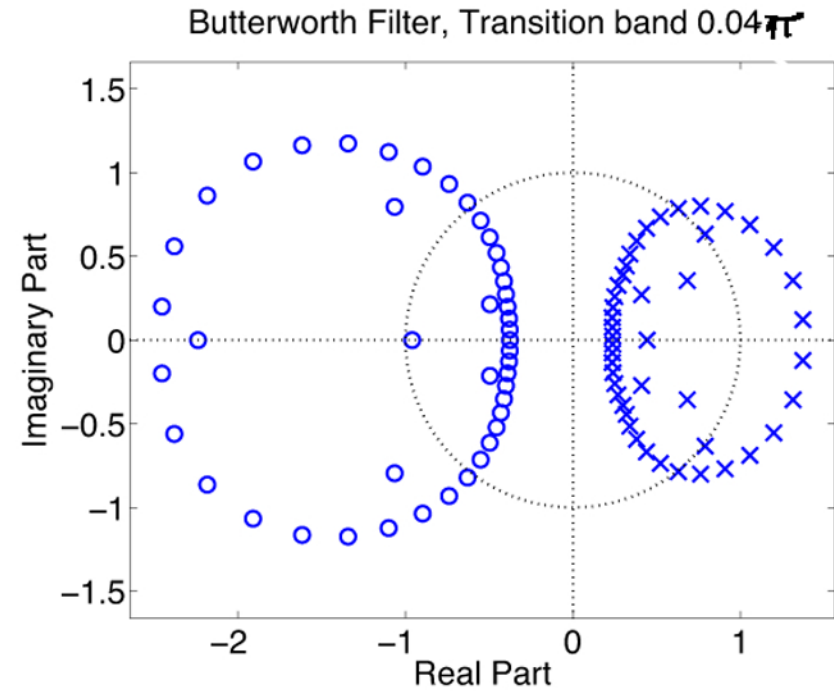

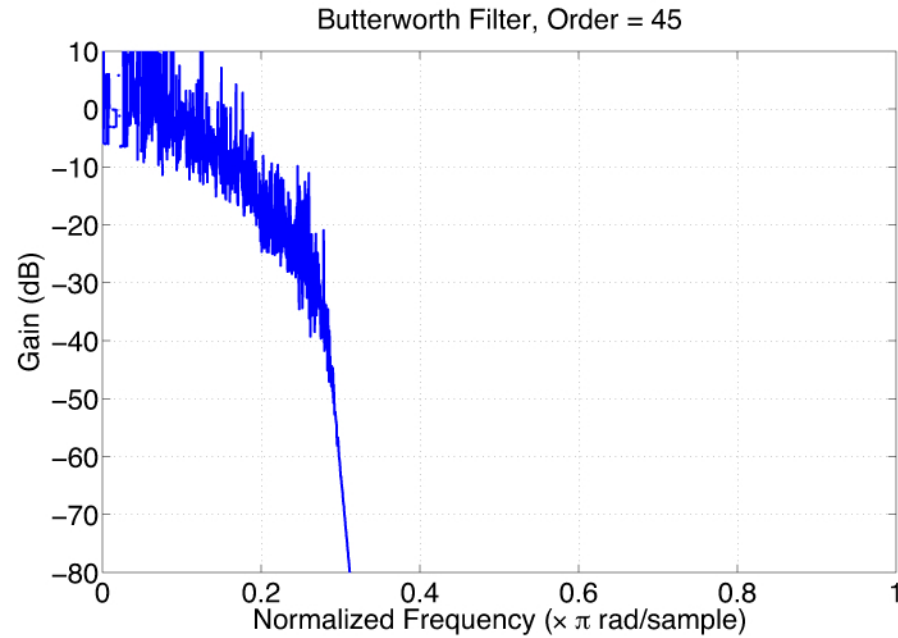

0.0010 0.0120 0.0660 0.2200 0.4950 0.7921 0.9241 0.7921 0.4950 0.2200 0.0660 0.0120 0.0010

$A =$

1.0000 -6.0629 17.7293 -32.6911 42.0486 -39.5581 27.8126 -14.6843 5.7654 -1.6386 0.3195 -0.0383 0.0021

Case 2: Transition Band 0.04π rads

3

Coefficients, transition band 0.04π

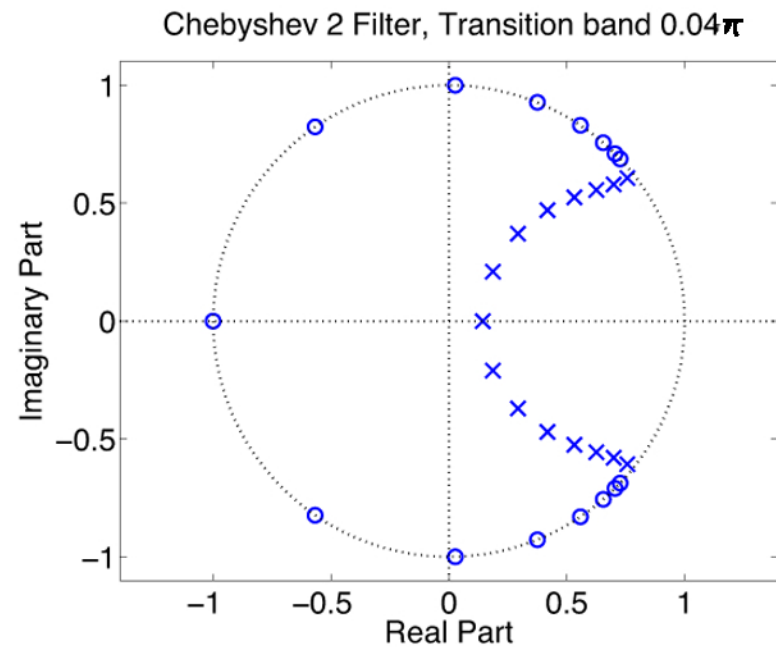

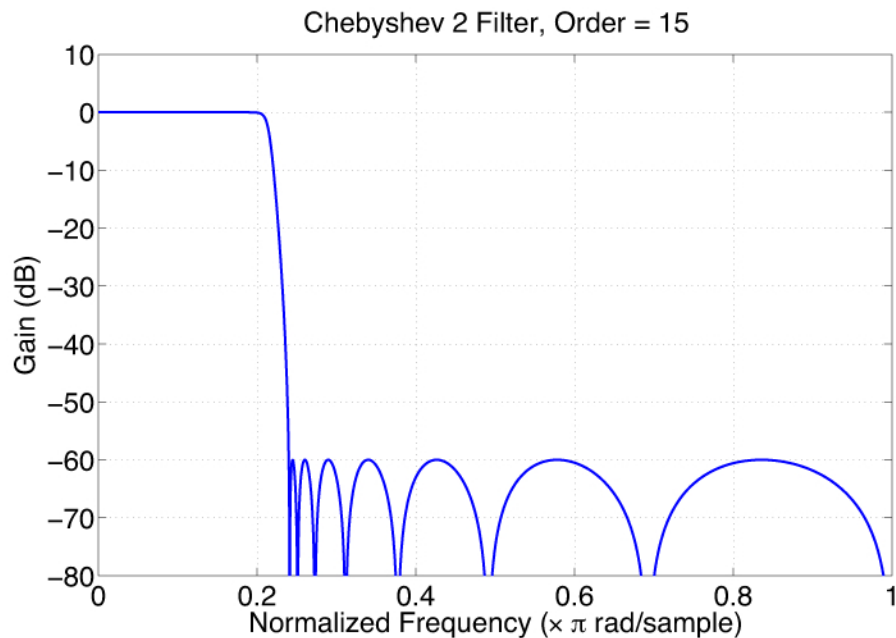

$B = 1.0e-07 *$
