# 1 AMD Opteron™ Processor

The following sections contain thermal/power and related BIOS specifications for AMD Opteron™ processors. Each column in the BIOS and thermal/power tables represents a specific Ordering Part Number (OPN). Section 1.1 provides an example of the OPN structure for this processor family. Availability of processors corresponding to certain OPNs is limited.

Refer to the *AMD Opteron™ Product Data Sheet*, order #23932 for all other electrical specifications for the processor. Refer to the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order #26094 for power management BIOS requirements.

**Notes:**

1. CPUID extended function 8000\_0001h fields are used by BIOS in uniquely associating a given processor to the P-states that are valid for that processor. Refer to the BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors, order# 26094.
2. FIDVID Status Register, MSR C001\_0042h.
3. StartVID and MaxVID are programmed during device manufacturing with part-specific values for Rev E and later processors with 'Variable' indicated by the Operating Voltage OPN character, and can have one or more valid options. All valid options for StartVID, MaxVID, and VID\_VDD will be specified for the corresponding OPN. For information on the relationship of StartVID and MaxVID to VID\_VDD refer to the BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors, order# 26094.
4. The VID\_VDD voltage is the VID[4:0] requested VDD supply level. Refer to the appropriate functional data sheet for details.
5. Thermal Design Power (TDP) is measured under the conditions of Tcase Max and VDD=VID\_VDD, and include all power dissipated on-die from VDD, VDDIO, VLDT, VTT, and VDDA. Contact your Field Application Engineer for more information on TDP specifications.
6. Implementation of this P-state is optional in BIOS.
7. Limited availability.
8. Thermal Design Power (TDP) specifications for dual core processors assume equivalent P-states (Voltage and frequency) and equivalent Tcase conditions for both cores. Refer to the BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors, order# 26094, for details on P-state operation for dual core processors.

## 1.2 AMD Opteron™ Processor Thermal/Power Specifications

The tables in this section contain the power and thermal specifications for this processor family. Each column in the thermal/power specification tables represents a specific Ordering Part Number (OPN). Section 1.1 provides an example of the OPN structure for this processor family.

**Notes:**

1. Tcase max is the maximum case temperature specification which is a physical value in degrees Celsius. This value is programmed into Rev D and later processors. Refer to the AMD Functional Data Sheet, 940 Pin Package, order# 31412, and the THERMTRIP Status Register in the BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors, order# 26094.
2. Tcase max is programmed during device manufacturing with part-specific values for Rev E and later processors with 'Variable' indicated by the Case Temperature OPN character, and can be any valid Tcase max value in the range specified for the corresponding OPN.
3. Tcontrol max (maximum control temperature) is a non physical temperature on an arbitrary scale that can be used for system thermal management policies. Tcontrol max represents the value at which the processor has reached Tcase max when measuring the thermal diode with a dual sourcing current temperature sensor. Refer to the AMD Functional Data Sheet, 940 Pin Package, order# 31412, and the THERMTRIP Status Register in the BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors, order# 26094. Temperature is in degrees Celsius on the Tcontrol scale.
4. The VID\_VDD voltage is the VID[4:0] requested VDD supply level. Refer to the appropriate functional data sheet for details.
5. Thermal Design Power (TDP) is measured under the conditions of Tcase Max and VDD=VID\_VDD, and include all power dissipated on-die from VDD, VDDIO, VLDT, VTT, and VDDA. Contact your Field Application Engineer for more information on TDP specifications.
6. Thermal Design Power (TDP) and IDD max for Rev E and later processors with 'Variable' indicated by the Operating Voltage and Case Temperature OPN characters are the limits at the highest Tcase max in the specified range for the corresponding OPN. Products will conform to the TDP and IDD Max limits at all valid voltages. The relationship of Tcase max and Thermal Profile to TDP for a specific device is defined in
7. Assumes Tcase max, VID\_VDD, clock divider set to 32.
8. Assumes 50°C, min P-state VID\_VDD, clock divider set to 32.
9. Assumes 35°C, VDD, VDDA, and VLDT supplies are off, VDDIO and VTT are powered, memory in self-refresh mode and DDR SDRAM interface tri-stated except CKE pins.
10. Thermal Design Power dissipated by the processor VDDIO, VTT, VLDT, and VDDA power planes only.
11. Thermal Design Power dissipated by the processor VDDIO, VTT planes only.
12. Implementation of this P-state is optional in BIOS.
13. Limited availability.
14. Thermal Design Power (TDP) specifications for dual core processors assume equivalent P-states (Voltage and frequency) and equivalent Tcase conditions for both cores. Refer to the BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors, order# 26094, for details on P-state operation for dual core processors.
15. IDDC1 specifications for dual core processors assume equivalent Voltage, clock divisor, and Tcase conditions for both cores.
